

How to.....

Play CDs through Windows Media Player (2007 version)

Please note that sound is only available through headphones - please contact a member of staff for further assistance.

You may be able to play CDs or DVDs on the Library PCs, but speak to a member of Library staff before hand. Due to close location of the PCs in the public area, it may not be possible to activate the sound.

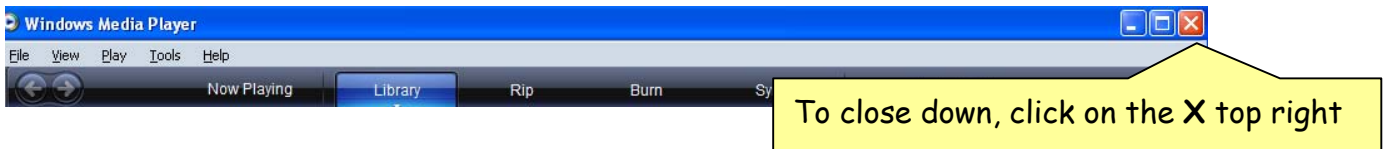

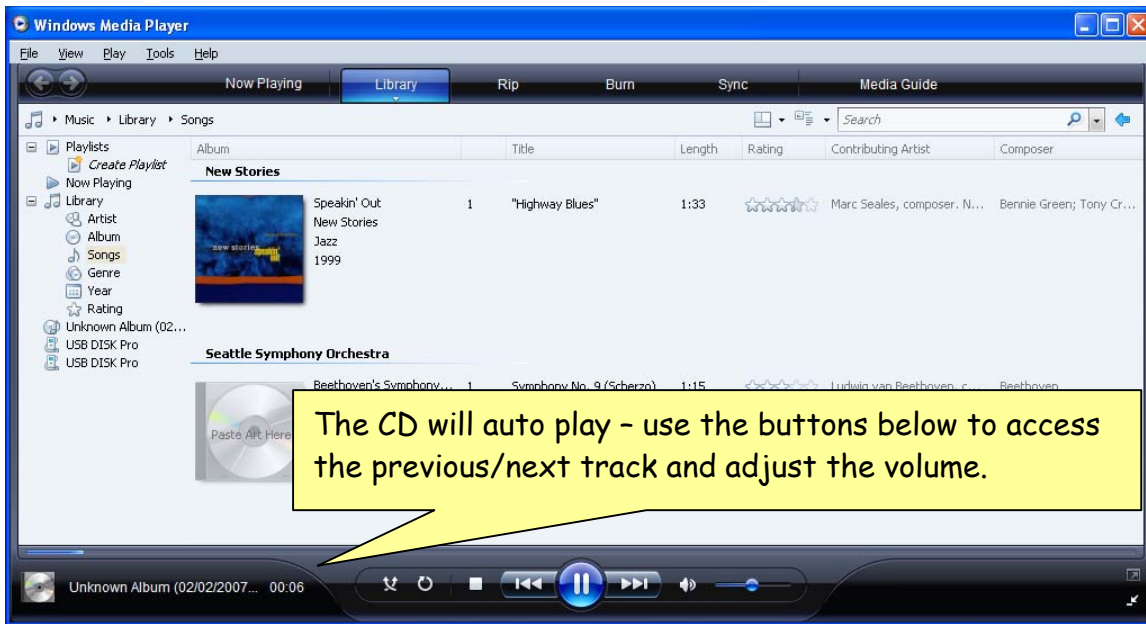

Remove CD from case

Open the CD tray. Once the tray is open you are ready to place a disc in. The disc must be placed **label** side up. Once the disc is clicked in you can close the tray.

Trouble shooting with sound

If you cannot hear any sound, check the sound function is muted. Click on the Volume muted icon and un-tick the Mute box. You can also adjust the volume by using the slide control.
