

# Types of Storage

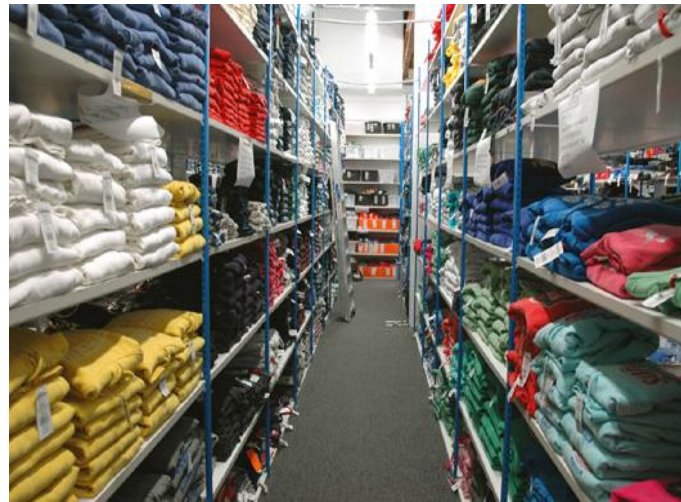

## No Storage

Some shops don't have any room for storing excess goods so, all products are stocked in the shop. Anything they don't have will have to be ordered in.

## In a store room

Some larger shops have room at the back of the shop to stock all extra goods that do not fit out in the main shop. Extra sizes and new stock will be kept here. This is also how shoe shops work, only one shoe is out in the shop, all the other sizes are kept in neat rows back in the store room.

## On the shop floor

Warehouse shops like Costco and Macro store all the stock out in the shop. This is because the products come in large amounts and can be stored on the high shelves for customers to see and access with help.
