Appendix 5: Analysis of aggregate resources in ECA 5: Lenches Ridge

ECA Summary for the Third Stage consultation on MLP (Spring 2015):

Sand and gravel

There are 33 resource areas identified for sand and gravel in Lenches Ridge ECA:

- Key: 4
- Significant: 5
- Not significant: 18
- Compromised: 6

Crushed rock

There are no resource areas identified in Lenches Ridge ECA for crushed rock.

Non-aggregates

BGS data indicates that there are deposits of clay in this ECA.

Overview of resource assessment for ECA 5

Resource description:	 2nd terrace (Wasperton) sand and gravel. An old pit south-west of Offenham formerly exposed 0.9m of soil with pebbles, 0.2m of yellow sand, 0.9m of gravel with seams of red clay, 0.2m of fine sand, 0.9m of gravel, 0.2m of yellow sand on blue lias (total 2.4m of sand and gravel). The gravel contains many bunter and flint pebbles together with Jurassic limestone. (Estimated resource depth based on old pit south-west of Offenham showing depth of 2.4m)
Assessment of resourc	e for the second consultation on MLP (Autumn 2013)
Commentary:	A medium-sized resource area compromised by the village of Offenham. The deposit continues to the north and east of Offenham, this section of the deposit is considered separately as resource area 5/17.
Crude estimate of resource:	Area: 71 ha x average depth: 2.4m / 2 Estimated resource volume: 852,000 m ³ Estimated resource tonnage (at 2 t/m ³): 1,704,000 tonnes
Conclusion:	Compromised by development.
	e for the Third Stage consultation on MLP (Spring 2015)
Revised estimate of resource:	Area: 71 ha x average depth: 2.4m / 2 Estimated resource volume: 852,000 m ³ Estimated resource tonnage (at 1.65 t/m ³): 1,405,800 tonnes
Conclusion:	Compromised by development.
