

Further to my previous 2 recent emails, I also wish to query the base line noise sample which was taken in August 2024. I understand that this was for a couple of days?

I am just thinking that this would probably have been a fairly quiet time with summer holidays/no school runs and so the sample taken at the time would have been 'light' on traffic noise to be gathering true information. The noise as a whole, with both component parts (quarry and traffic), would be different, at different times of the year.

Best wishes,  
Marcie Smith
